

What data products are available from the 2DVD?

FAQ 2

For post processing of the matched data a number of software including **SOURCE CODE** is available, **ASCII OUTPUT** of the measured particle by particle information such as:

- timestamp,
- equivolumetric volume (liquid precip.) ,
- vertical velocity,
- oblateness
- horizontal velocity (liquid precip.),
- rainrate and
- drop size distribution

can be done.

The raw data (camera A and camera B shadow and line information) can become matched by an algorithm especially for snow (make_sno) or with updated calibration constance (rematch).
